

BEOLINK CONVERTER

Enjoy the sound from your legacy products in the new BeoLink Multiroom system

WHAT IS THE BEOLINK CONVERTER NL/ML FOR?

The BeoLink Converter NL/ML is the 'connector' between legacy products such as BeoSound 9000 and BeoVision 10 and all new Network Link products. This means you can combine products freely from the past and present as if it was one system. With a BeoLink Converter NL/ML, you can listen to music from a legacy product on the speakers of a new product and vice versa.

Power consumption

7.7 W

Power supply

100 - 240 V, 50/60Hz

SETUP EXAMPLES

Use your legacy music system with your new TV

If you have BeoSound 9000 in one room and a new Network Link TV in another, you can listen to sound from BeoSound 9000 on the speakers of the TV, or listen to TV sound on the speakers connected to your BeoSound 9000. In addition, you can now use your BeoMusic App to control a legacy product.

Combine new music systems with a legacy music system

If you own a legacy music system and wish to add a new music system to the setup it is possible with the BeoLink Converter NL/ML. You will be able to distribute sound freely among the old and new products. You will be able to listen to your old sources such as CD and radio from e.g. BeoSound 9000 on all new products and new sources like TuneIn and Deezer on your legacy products.
